

Unity Audio Fundamentals

BASIC SOUNDSCAPING IN UNITY

Dano Kablamo

MUSIC & SOUND DESIGNER, UNITY DEVELOPER

@Dano_Kablamo www.PrismicStudios.com

Course Overview

Reactive Soundscapes

- Layered Dynamic Music
- Environmental Ambience

Juicy Player Audio

- Event Audio with C# script

Audio Mixing with Unity

- Blending sounds to put our audience in our world.
- AudioMixers and AudioMixerSnapshots

Unity Audio Effects

- Reverb, Compression, EQ, etc.

Your sound is
half of what you
give to your
player.

As an indie developer, you are responsible for your game's audio, even if you didn't create it yourself.

It's worth taking the time to do it right.

Prerequisites:

- Elementary knowledge of Unity
 - Creating GameObjects
 - Adding Components
- Elementary knowledge of C# script
 - Creating scripts
 - Interacting with scripts in Unity

What Is a Soundscape?

Ambience
a blend of
environmental sounds:
wind, animals, etc.

Dynamic Music
Music that reacts to
the narrative in the
story.

Event Sounds
The sounds triggered
by current actions in
the scene.

Unity's Essential Audio Components

AudioClip

Audio file you wish to play. These are stored in the assets folder.

AudioSource

Plays clips, can adjust volume, pitch, pan, and 3D audio effects.

Audio Listener

This component acts as your “ears” within your game world.

Playing Sounds in Unity

Automatic

Sound plays automatically when the scene loads or the object is created.

OnTriggerEnter

Sound plays when player enters a trigger or a collider.

Scripted Events

Sound plays when a custom function is called.

Summary

We must **IMPACT** our audience

- Music alone is not enough!
- Soundscape
 - Ambience
 - Music
 - Sound Effects

Playing Audio in Unity

- Playing Automatically
- Playing on OnTriggerEnter
- Playing on Custom Function
